

COMMAND-LINE MEDIA TOOLKIT

Download media with control.

yt-dlp is a feature-rich command-line audio and video downloader. Choose formats, subtitles, metadata, output names, and post-processing without leaving your terminal.

[Download for Windows](#)[See the workflow](#)

For other platforms and installation methods, use the official release and installation documentation.

terminal

```
$ yt-dlp -f "bv*+ba/b" --write-sub URL
[info] Available formats requested
[info] Downloading subtitles
[download] 100% of media selected
[Merger] Merging formats into output file
```

Broad extractor support

Explore the project's published supported-sites list for the current extractor coverage.

Python 3.10+

The project declares support for modern Python versions, including CPython and PyPy.

Unlicense

The project publishes under the Unlicense. Review the included license before use or redistribution.

DESIGNED FOR PRECISE OUTPUT

A downloader that stays out of your way.

Useful controls are organized around the work itself: select what you need, describe the output, then automate the repeatable parts.

Format selection

Inspect available formats and select video, audio, or combined output with expressions that match your requirements.

Metadata and subtitles

Work with subtitles, thumbnails, chapters, metadata, and post-processing options from one command-line interface.

Repeatable workflows

Use configuration files, output templates, preset aliases, and plugin support to keep routine downloads consistent.

THE PRACTICAL PATH

Start simple. Grow into the details.

The core command remains short. The richer controls are there when the job calls for them.

Use the official documentation to choose the installation route that fits your environment, then begin with a URL:

```
yt-dlp URL
```

- 1 Check formats when you need a specific quality or container.
- 2 Add subtitles, metadata, archives, or naming templates when the output needs structure.
- 3 Move repeatable choices into configuration for the next run.

LOCAL SITE TOOLS

A practical companion, kept in your browser.

These controls help you shape commands and browse project guidance. They store only local page preferences and never send a download request on your behalf.

- Format planner
- File converter
- Local model suite
- Site settings

Build a starting command

Use this as a local drafting aid. Verify each option against the official documentation before running it.

Media URL

https://...

Output preference

Best video + audio

Subtitles

Do not request subtitles

Output template

%(title)s.%(ext)s

Templates are supported by yt-dlp; this field does not write to your configuration file.

Draft command

Copy draft command

Output checklist

Format expression

Ready

Metadata & captions

Optional

Archive behavior

Configure separately

This planner is intentionally transparent: it never starts a download, stores credentials, or accesses browser cookies.

BEFORE YOU BEGIN

Use the project's current guidance.

► Where do I install yt-dlp?

► Which websites are supported?

► What should I check before downloading?

Keep your media workflow in your own hands.

Read the installation guide, download the release that fits your system, and start from one clear command.
